COVID-19 Response

The coronavirus (COVID-19) has communities on high alert, and VISTA's clinicians are on the front lines caring for patients and supporting our healthcare partners. Now and always, the health and well-being of patients, clinicians and hospital staff is our top priority. As part of these efforts, VISTA has implemented a point-to-point video solution that will enable clinicians to see patients virtually.

This best practice solution is delivered through our partners at Envision and through the SightCall platform.

What you will need?

- SightCall is designed to run on any tablet or phone with either iOS (8+) or Android (4+)
- Web extension works on browsers Firefox and Chrome (Chrome is recommended)
- To establish a SightCall session, a video and audio-capable device is required

Why SightCall?

No shared air space

SightCall enables clinicians to see patients virtually, without sharing the same air space, reducing their risk for contagion.

HIPAA compliant

SightCall is fully HIPAA compliant.

Easy to use

SightCall can be accessed on a simple desktop or personal device.

No interference with IT system

SightCall will not interfere with your facility's IT system; it is a direct, point-to-point video solution.
